Elevate® Celebrates 10 Years of Accomplishments in Fabrication and Packaging Technology (2012-2022)

Cranston, RI USA - Launched a decade ago, Technic's specialized line of semiconductor deposition chemistry marketed under the name Elevate has become one of the most recognized brands in semiconductor fabrication and packaging around the globe. The use of Elevate processes has grown significantly in the last five years, more than quadrupling sales, with significant growth expected in the next few years.

Elevate chemistry is now in production on every major tool supplier platform and is the leading sulfite Gold process in the world. With the growing demand for safer operating conditions for workers and new regulatory demands, Elevate Ni 5950 became the first boric acid-free nickel in the industry. With a full range of products covering Gold, Gold/Tin, Copper, Tin, and Indium, Elevate continues to provide exceptional solutions for advanced processing such as FOWLP (Fan-Out Wafer Level Packaging), Fan-In WLP, Flip Chip, and 2.5/3D.

To meet the current demands of the semiconductor market and an expanding customer base, Technic has opened dedicated Elevate applications labs globally for performing demonstrations of the processes on wafers up to 300 mm.

"In the ten years since launching the Elevate brand, we have enjoyed steady growth in our market share and look forward to what the future has to offer. As with all Technic products, the Elevate line has been developed to meet the specific requirements and demands of the semiconductor industry with a dedicated and talented team of experts. Their support has helped make the Elevate brand the success it is today."

- **Anthony Gallegos**, Global Product Manager, Semiconductor Technology

Technic supplies some of the most advanced solutions for semiconductor fabrication and packaging in the industry including electroplating chemistry, photoresist strippers, cleaners (post-etch residue removers), metal etchants, and high purity wet chemistry, as well as manufacturing equipment and analytical controls.

About Technic

For over 75 years, Technic has been a global supplier of specialty chemicals, custom finishing equipment, engineered powders, and analytical control systems to the semiconductor, electronic component, printed circuit board, industrial finishing, and decorative industries. Technic is also a major supplier of engineered metal powders to the solar industry.
