

Carbon Filter Cartridges

Technic carbon filter cartridges feature an outer pre-filter-purification layer consisting of finely pulverized activated carbon that has been locked on to a blend of polyolefin and synthetic fibers using a unique wet accretion process. This layer provides 4 true depth filtration-purification solution passes without carbon channeling or media migration. An inner layer of polyolefin and synthetic fibers selected for a nominal 7.5-micron final filter. This performs a final scrubbing job assuring no carbon bleed-off.

Cartridges feature an outer polyolefin netting for surface integrity and an inner polypropylene core for compressive strength. Injection molded polyethylene base end-caps provide for effective sealing when cartridges are used alone or when stacked.

Carbon Cartridges

Item	Quantity	Type	Part #
5C	42/case	Treatment/Filtration	72440-3
10C	30/case	Treatment/Filtration	72450-7
20C	30/case	Treatment/Filtration	72460-2
30C	30/case	Treatment/Filtration	72470-6

NOTE: Each 10 inch length of cartridge contains approx. 4 oz. of powdered carbon with nominal filtration rating of 7.5 μ
